

Telepractice via MyTherapyTracker

MyTherapyTracker
For Therapists - By Therapists

Once you have started a Telepractice session, there are a number of functions available along the bottom of the screen. Note: your clients will have all of the same functions available to them as well.

Share your screen

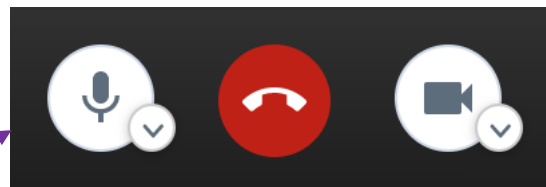

Click here to share your screen with your client. You can choose to share your whole screen or just an application that is open on your computer.

This is great for using electronic resources in your therapy sessions.

Open/Close chat

If you wanted to, you can type text here for your client to receive as an in-session message.

This might be useful for sharing a link to a website.

Mute/Unmute

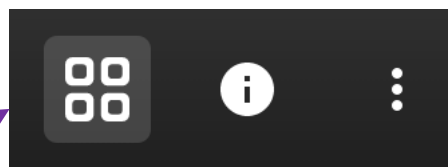

Click here to mute or unmute your microphone, or on the down arrow for more audio settings.

Leave

Click here to leave the Telepractice session.

Start/Stop Camera

Click here to start or stop your camera, or on the down arrow for more video settings.

Toggle tile view

Click here to change the view:

- Full screen view of your client, with your screen in the top right.
- Tile view with both yours and your client's screen the same size.

Information

Click here to view information about the session, including the web browser link and the ability to set a password.

For **extra security**, once your client has arrived in the session, you can enter a password here, press 'Enter' on your keyboard, and no-one else will be able to access the session whilst it is running. The password resets when you leave the session.

More actions

Click here to use various functions and settings, including to record the video session, if desired.
